

Lemuel Torrefiel Web Development and AI Specialist Portfolio

Confidentiality

- ▶ The purpose of this portfolio is to compile achievements from the past focusing only on UI snapshots.
- ▶ No data has been shared together with this portfolio to ensure clients' data privacy and security.
- ▶ Company logos are hidden in this portfolio.

My Tech Stacks

- ▶ In the world of AI, I have practiced several tech stacks including OpenAI API, Google Gemini API, Anthropic's Model Context Protocol and Claude.
- ▶ My main field before diving to AI Integrations are Data Analytics and Data Engineering. I have developed skills related to data analysis and database management. I want to dive into web development by utilizing what I have learned with my vast experiences in the field of data.
- ▶ My tech stacks in backend development are Python, SQL, MongoDB, FastAPI, and Flask. Additionally, I have a lot of tools to offer from my past experiences with Data Analytics.
- ▶ I develop frontend apps using React Typescript with the help of AI tools.
- ▶ I also have the knowledge with low code tools like n8n, Make and Zapier.
- ▶ I am continuously learning to be a full stack developer. With the help of online tutorials and practical applications, I have developed some web apps that I want to share in this portfolio.

This is my portfolio website, deployed using Vercel.

You may view this link: [Lemuel Torrefiel's Portfolio](#)

This website contains more of my background information, projects and tech stacks.

Backend:
FastAPI, n8n, MongoDB,
Redis, OpenAI and
Google Gemini API

Frontend: React
Typescript

Deployment: AWS, GCP
and Vercel

Instagram Influencers Scraper using Apify and Google Sheets as database - The objective of this n8n flow is to scrape Influencers from Instagram for marketing team to automate outreach to promote products. I also have versions of these for Tiktok and Youtube (using Youtube API).

 Coming Soon on Shopify

AI Customer Support **That Actually Works**

Add an intelligent chatbot to your website that learns your products, answers customer questions 24/7, and helps convert browsers into buyers.

 Shopify integration coming soon

SupportRules - Customer Support AI Automation platform. This is my startup website, a full stack project to allow users to automate the creation and management of their Customer Support AIs who can talk to customers with the knowledge about their Products, Orders, Customers and their set of Rules.

What We're Building

Support That Works For You

We're building AI support that helps answer customer questions so you can focus on growing your store.

-  **Help Answer Questions Faster**
AI can respond to common product questions quickly
-  **Handle More Conversations**
AI support can help manage multiple customer inquiries
-  **Always-On Support**
AI is available anytime, even outside business hours
-  **Faster Response Times**
Quick answers can improve customer experience

Quick Responses

AI answers instantly

Smart Learning

Adapts to your products

Easy Setup

Get started in minutes

Customer Support Live Chat Bot: This project is a web app that mimics that functionality of an AI chat bot that is trained to be a Customer Support agent. The agent answers the inquiries of the user related to his/her orders like warranty, complaints and returns. The AI bot has also the capability to raise a ticket if the user wants to escalate the issue. The AI behind this is Google Gemini.

You may try refer to this link for a live demo: <https://cd-chatbot-lilac.vercel.app/>

Travel Destination Finder AI: This web app is a travel assistant buddy because it generates smart search results for potential travel destinations base on the user's prompt.

You may try this demo link: <https://travel-destination-frontend-two.vercel.app/>

Discord AI Bot: An AI Assistant that helps you manage financial metrics such as Expenses, Bills and Cash Flows. For Live Demo, visit this link to join the server: <https://discord.gg/N9VvwBE3>

Restaurant Finder AI: This web app is dedicated for users to find relative restaurants or food stores base on their preferences. It uses Foursquare API to find relative restaurants base on the user's inquiry. The AI assistant behind this is Google Gemini, it processes the user into a prompt, generates results from Foursquare and displays them as categorized texts and images.

You may try this here in this live demo link: <https://restaurant-finder-sage.vercel.app/>

This is web app to track Financial metrics such as Expenses and Cash Flows. The backend is deployed using AWS EC2 while the frontend is in Vercel. This project is still in progress, I am using this personally to help me track my financial metrics.

AGE BRACKET

Age distribution:

Error rate seems to favor old aged employees, the age range of 51-65 had the best error average of 1.96%. The customer satisfaction falls with the young ones, garnering 49.31%, while the best comes from the middle bracket 36-50 with a rating of 54.31%.

TENURE

Tenure Distribution

Surprisingly, tenure of more than 6 years had the highest average of error rate with 2.15%, compared to the best 2.05% of 1-3 years. Meanwhile, customers gave the best rating for 7-10 while the middle range of 4-6 garnered only 50.45% average rating.

MONTHLY ERROR RATE TREND

The average error rate trend is slightly consistent at around **1.5%** to maximum of **2.69%**.

The monthly error rates has good numbers, not exceeding 5% as goal.

The months of September and December have the best averages of error rate with **1.66%** and **1.73%** respectively.

Meanwhile, the month of October needs attention with the highest error rate of **2.69%**.

[Google Sheets] Infographics with statistical insights.

DOMAIN

The domain [tuso.com](#) had the best error rate of 1.89%, but receiving the least customer satisfaction of 49.85%. Meanwhile, the domain [basil.com](#) had the highest CSAT of 52.82% together with a manageable error rate of 2.02%.

SUMMARY AND SUGGESTIONS

- 1) The average customer satisfaction trend is very low and did not meet the goal of 90%. Focus more on improving the satisfactory rating for the upcoming month of April, May, and June where the 2017 data is below 50%.
- 2) It seemed that customers often dissatisfied when it is summer season. Possible factor is the time being spent when a customer calls. Focus on reducing the time being spent by the customers when having transactions during summer.
- 3) Customers prefer fast transactions, team leader Buckey Barnes' data showed it. He had the best customer rating while having the highest total transactions. Although, he have to give focus on his teams' error rate for improvement.
- 4) Team leaders should focus more on their approach, working with young ones. The young ones have the least satisfaction rating from customers. Team leaders can ask the adult ones on how they manage to give customers a good service.
- 5) The domain [tuso.com](#) can be approached by the team leaders, to improve their user interface, timeline and etc. [tuso.com](#) falls below 50% with satisfactory rating from customers, which impacts the employees' experience during a transaction.
- 6) There are 19 users that have below 50% average CSAT. Team leaders may approach their respective people for improvement strategies.

MONTHLY CUSTOMER SATISFACTION TREND

The month of January had the best average of 59.11%, while the month of April had the worst average of 46.58%.

TEAM LEADERS

Eventhough having the highest average of 2.80% error rate, team leader Buckey Barnes managed to gain the highest average customer satisfaction rating of 52.55% while doing the highest total of transactions of 165,039 (37.0%).

[R] Develop R and SQL scripts to automate ETL jobs before jumping into dashboard development.

The screenshot shows the DBeaver 23.2.4 SQL Editor interface. The title bar indicates the current file is '<dev> Matching KPIe and MV.sql'. The menu bar includes File, Edit, Navigate, Search, SQL Editor, Database, Window, and Help. The toolbar shows various SQL actions like Commit, Rollback, and execution buttons. The SQL Editor pane contains a complex query with multiple subqueries and joins. The query is as follows:

```
SELECT
  a.kpi_name AS kpi_name_kpie,
  a.hierarchy_code,
  a.line_of_business,
  a.sub_line_of_business,
  a.process,
  a.nom AS nom_kpie,
  a.denom AS denom_kpie,
  b.nom AS nom_gpr,
  b.denom AS denom_gpr,
  a.kpi_value AS kpi_value_kpie,
  b.kpi_value AS kpi_value_gpr,
  CASE
    when round(a.kpi_value, 2) = round(b.kpi_value, 2) THEN 'Yes' ELSE 'No'
  END AS matching,
  a.kpi_value - b.kpi_value as difference
FROM
(
  SELECT
    'kpie view' AS source,
    ds.kpi_name AS kpi_name,
    er.hierarchy_code,
    er.line_of_business,
    er.sub_line_of_business,
    er.process,
    SUM(ds.measure_nom) AS nom,
    SUM(ds.measure_denom) AS denom,
    CASE
      WHEN SUM(ds.measure_denom) = 0 THEN 0
      ELSE (SUM(ds.measure_nom) / SUM(ds.measure_denom)) * 100
    END AS kpi_value
  FROM
    kpi_engine.v_utl_mindbody_quality ds /* replace this with your KPIe view/KPIe master table */
  JOIN
    public.epms_roster_v2 er
```

The status bar at the bottom shows 'SGT | en US | Writable | Smart Insert | 72 : 32 : 2545 | Sel: 0 | 0'.

[Excel] Inventory software in an Excel file using VBA and Macros.

**My skills
doesn't end
here, as I
continue to
grow in the
field of AI
Integrations.**

- 
- 
- AI Model Training (Beginner)
 - Machine Learning Concepts (Beginner)
 - App Sheets (Intermediate)
 - Azure Document Intelligence (Beginner)
- 

Future initiatives

1. Actively learning other principles of AI in Python such as Machine Learning, to be able to train locally available AI models and fine tune them based on clients' specifications.
2. Exploring other emerging technologies such as Model Context Protocol and Google Agent Development Kit which I see as an emerging tech stacks in AI.
3. Collaborative partnerships. Foster collaborations with tech innovators and industry leaders to drive innovation. Observe and learn from experienced AI Experts, influencers and content creators.
4. Practice more by doing projects, which is my natural way of learning tech stacks.

**This is the end of
my presentation.**

**Thank you very
much for your
time!**
